

Igor Deych Senior Backend Engineer (Go, Node.js, Fintech)

hurgadan@gmail.com, telegram: @hurgadan

Location: EU, EU Work Permit

LinkedIn: www.linkedin.com/in/igor-deych-985b814b

GitHub: <https://github.com/lucrumx/bot>, <https://github.com/cliplink>

- 10+ years of backend engineering experience in high-load Fintech, E-commerce, and Telecom.
- Core expertise: Go, Node.js (NestJS), TypeScript, PostgreSQL, Microservices, and Event-Driven Architecture (Kafka, Pub/Sub).
- Architected and migrated monolithic systems to microservices, supporting millions of daily transactions.
- Led technical integration with a top-tier retail bank and optimized a key report from $O(n^2)$ to $O(n)$, cutting execution time from 1 hour to 30 seconds.

Technical Skills

- **Languages:** Go, TypeScript, JavaScript, PHP, Bash, SQL, PL/SQL
- **Architecture:** Microservices, REST APIs, event-driven architecture
- **Backend:** Node.js, NestJS, Koa, Express
- **Cloud & DevOps:** Google Cloud, Yandex Cloud, Docker, Kubernetes, Docker Swarm, GitHub Actions, GitLab CI/CD
- **Databases, ORM:** PostgreSQL, MySQL, Oracle, Redis, TypeORM, Sequelize, gorm
- **Messaging & Streaming:** Kafka, Google Pub/Sub, NATS, BullMQ (Redis)
- **Authentication & Security:** OAuth2, JWT
- **Testing:** Unit, Integration, Contract testing (Jest, Mocha, Mockery, testify)
- **Observability:** Pino, Grafana, Loki, Promtail

Work Experience

ParagoSoftwareX

Senior Backend Engineer | Feb 2025 – Present

Stealth-mode startup building a next-gen AI-powered property management platform

- Architected and built foundational microservices (Go, NestJS) for a new property management platform, establishing core authorization, billing, and accounting logic.
- Designed an event-driven architecture using Google Pub/Sub, enabling reliable, asynchronous communication between 5+ core services.
- Implemented a robust background job processing system with Redis and BullMQ to handle asynchronous tasks like report generation and notifications.
- Owned the backend development for an AI-powered chatbot, designing the API (Go) to process tenant maintenance requests and integrating with the AI service provider.
- Established CI/CD pipelines from scratch using GitHub Actions for automated testing and deployment

PotokDigital Ltd

Senior Backend Engineer / Engineering Manager | Oct 2020 – Feb 2025

B2B / B2C investment platform providing portfolio management and billing services for financial advisors.

- Led the architectural overhaul of a monolithic fintech platform, splitting it into event-driven microservices (Node.js, Kafka) to support a system processing millions of daily transactions.
- Refactored a critical investment report by optimizing the algorithm from $O(n^2)$ to $O(n)$, slashing data processing time from ~1 hour to under 30 seconds.
- Acted as the lead technical delegate for an integration with a top-tier retail bank, designing the integration architecture and ensuring successful delivery for their multi-million user mobile app.

- Designed and implemented a new observability stack (Grafana, Loki) which reduced critical production incidents by ~70% through proactive monitoring and alerting.
- Mentored 3 backend developers, leading code reviews and architectural sessions that improved team-wide code quality and design patterns.
- Managed a cross-functional team of 5 engineers, ownership domain, translating business goals into a prioritized technical backlog and ensuring predictable delivery.

ATM Ltd - Senior Full-stack Developer | 2012 – 2020

Developed and maintained a large-scale e-commerce auto parts catalog with millions of SKUs, integrating with multiple external supplier systems. Owned the MySQL database layer, responsible for schema design, performance tuning, and complex query optimization.

Early Career | 2003 – 2012

- **1C-Bitrix Ltd, Senior Full-stack Developer (2006-2012):** Developed and supported a large-scale B2B software marketplace using PHP, MySQL, and Oracle.
- **Tele2 & Beeline Russia, Oracle Developer & Support Engineer (2003-2006):** Began career in telecom, developing and supporting high-availability billing and tariff systems using Oracle PL/SQL.
